Name	What it Means	Real-Life Example
OpenClaw	Very powerful AI agent system that can use many tools and automate tasks.	A **company AI assistant** that reads emails, searches the web, writes reports, and schedules meetings automatically.
NanoClaw	Secure agent system running in a **sandbox** so it cannot damage the system.	A **bank chatbot** that answers customer questions but cannot access sensitive databases directly.
ZeroClaw	Very lightweight agent designed to run on **old computers or low resources**.	A **small shop computer** running a basic AI bot that answers customer queries.
PicoClaw	Ultra-small AI agent that can run on **very cheap hardware**.	AI running on a **smart doorbell or IoT device** that recognizes visitors.
IronClaw	**Privacy-focused AI** where data never leaves the device.	A **hospital AI system** analyzing patient records locally without sending data to the cloud.
NanoBot	A **learning agent platform** mainly for students or beginners.	Students learning AI by building a **simple agent that summarizes articles**.
NullClaw	Experimental architecture for **future tiny AI chips**.	AI embedded in **tiny wearable devices** like smart glasses or medical implants.
MicroClaw	Small server-based agents for **chatbots and messaging automation**.	A **Telegram or WhatsApp bot** that answers customer service questions.
NemoClaw	Enterprise AI systems used by **large organizations**.	A **hospital AI system** that analyzes medical documents and helps doctors with diagnosis.
OpenFang	Full **AI agent operating system** managing many agents together.	A company system where **multiple AI agents collaborate** (research agent, coding agent, reporting agent).
FreeClaw	Very minimal **terminal-based AI agent**.	A developer using an AI agent inside **Linux terminal to automate commands or scripts**.

Simple way to remember

Think in terms of **scale of power**:

- **Pico / Zero / Micro** → small devices
- **Nano / Iron** → secure or private systems

- **OpenClaw / NemoClaw** → powerful enterprise agents
- **OpenFang** → full AI operating system
- **FreeClaw** → simple command-line agent

🔵 **BIG 4 — Most Popular**

Name	What it does	Real Example
OpenClaw	The original, most featured	Jack's dating profile incident 😅
NanoClaw	Security-first, isolated containers	Browse shady sites safely 🔒
ZeroClaw	Tiny & fast, written in Rust	Runs on old 2GB RAM laptop ⚡
IronClaw	Maximum privacy, data never leaves device	Doctor managing patient records 🏥

Note:

Name	Time Period	Reason for Change
Clawdbot	Nov 2025	Original name
Moltbot	Jan 27, 2026	Trademark complaint by Anthropic
OpenClaw	Jan 30, 2026	Fresh rebrand, current name

One product. One developer. Three names. That's it. 🦞

#OpenClaw (formerly Clawdbot, Moltbot, and Molty) is a free and open-source autonomous artificial intelligence agent developed by Peter Steinberger. It is an **autonomous agent** that can execute tasks via large language models, using messaging platforms as its main user interface.

A **claw = a tool or function attached to an AI agent**

The agent uses different claws to **search, think, remember, or act**.

Real-life analogy

Think of a **robot** 🤖 **with different hands/tools**:

- **Search claw** → like using Google
- **Reasoning claw** → like your brain thinking
- **Tool claw** → like using a calculator
- **Memory claw** → like writing notes in a notebook
- **Action claw** → like sending an email or saving a file

Very short definition

Claw = a capability/tool that helps an AI agent perform tasks.

🟢 BIG 4 — Most Popular

Name	What it does	Real Example
OpenClaw	The original, most featured	Jack's dating profile incident 😅
NanoClaw	Security-first, isolated containers	Browse shady sites safely 🔒
ZeroClaw	Tiny & fast, written in Rust	Runs on old 2GB RAM laptop ⚡
IronClaw	Maximum privacy, data never leaves device	Doctor managing patient records 🏥

▫️ LIGHTWEIGHT ONES

Name	What it does	Real Example
NanoBot	Only 4,000 lines of Python, easy to learn	Student reads entire code in a weekend 🧑💻
PicoClaw	Runs on $10 cheap hardware	Raspberry Pi controlling smart home 🏠
NullClaw	Written in Zig, ultra tiny	AI on a fingernail-sized microchip 🔬
MicroClaw	Low memory, messaging bots	$5/month server answering Telegram queries 💬
FreeClaw	Super minimal CLI tool	Developer runs tasks silently in terminal 💻
TinyClaw	Even smaller than FreeClaw	Ultra minimal single-task automation

▯ ENTERPRISE & BUSINESS ONES

Name	What it does	Real Example
ClawWork	Enterprise version with team collaboration, permission management, audit logs and SSO integration Wikipedia	Big company managing 100 employees' agents 🏢
NemoClaw	NVIDIA enterprise grade, compliance built-in	Bank with regulatory requirements 🏢
ArkClaw	Commercial SaaS product from ByteDance built on OpenClaw Lumadock	Chinese businesses using ByteDance cloud ☁

● TOOLS & UTILITIES

Name	What it does
ClawHub	Official skills marketplace with 800+ community skills Wikipedia — like an app store for agents
ClawCharts	Live dashboard tracking all Claw projects by star growth and activity DEV Community
ClawRouter	Solves the cost problem of using expensive AI models Shelly Palmer — routes to cheapest model
memU	Pluggable memory system for agents
MemOS	Alternative memory management
Moltworker	Cloudflare proof-of-concept for running OpenClaw inside Cloudflare's sandbox Lumadock

---

▯ EXPERIMENTAL & SPECIAL PURPOSE

Name	What it does
OpenFang	Full Agent Operating System — 7 modules working together
OpenBrowserClaw	Runs agents entirely in browser — no server needed
Gitclaw	Agent specifically for Git and GitHub workflows
Clawra	Companion-first agent with personality and memory

MimicLaw	Mimics user behaviour and style
Spacebot	Experimental parallel task execution
AstrBot	Chinese ecosystem first — supports QQ, Feishu, DingTalk with Chinese AI models like DeepSeek and Qwen Moltbotwiki

🛡 SECURITY FOCUSED FORKS

Name	What it does
SecureClaw	Defensive fork wrapping OpenClaw in a security layer Shelly Palmer
SafeClaw	Extra safety restrictions on agent permissions
Secure-OpenClaw	Hardened version of original OpenClaw
Carapace	Security shell around agent actions

Raw Document Just for Understanding By Jolly Gupta
